

Complete evidence for origin of explosives. German television shoots test explosion with **SECUTAG®**.

Optimal safety for blasting professionals! Micro colour code **SECUTAG®** passes "toughness test".

How important is the complete evidence of the origin of explosives? So important that the German television deals with this question in its broadcast production "Lohn des Schreckens" for the TV series "Mission X". The production shows the dimension of Nobel's invention for the economical progress.

The telecast works out the effects of the destructiveness as well as applications and new paths in the handling of the tremendous force that comes from modern explosives. We all know the corresponding pictures from the daily news.

A completely specific but nevertheless important subject in this case is the proof of origin of explosives and fuses. Nowadays everybody is able to relate to this. The broadcast production used the security system **SECUTAG®**, produced by Simons Druck. See below the pictures of a dangerous reportage.

This shooting was not half bad. Even the fire-fighters in waiting peered sceptically the preparatory work of the shot firer. "This bulk would be enough to blast a complete house", he explained unimpressed. We decided to watch the scene from a safe distance. The explosive was professionally affixed to a car. Run for cover! The production crew is waiting anxiously for the crucial moment. Three... two... one... zero. A deafening detonation shakes the site and the car is aflame. The television-crew is in full effort. Cameramen live a dangerous life, we notice. At the same moment we realise the siren of the fire engine coming near. The firemen fight the blazing flames with a C-hose. The production crew has to bring the situation in the can within a few minutes. Five minutes later and the show is over. Really? Suddenly men in white overalls seem to appear from nowhere. The forensic unit has arrived. Not even the smallest detail of evidence has a chance to escape their notice. Fast as the wind the unit discovers what it is searching for. Triumphant they present their findings. **SECUTAG®**, it resounds throughout the site. Once again it was demonstrated that **SECUTAG®** provides an unambiguous verification of the originality of products.

At a glance: The advantages of **SECUTAG®** protected products

A job just for a shot firer **SECUTAG®** is being admixed to the explosive.

The tautness rises. The film production crew takes the settings for the shoot.

The final preparations are made. Now the crew has to keep away in a safe distance.

Four...three...one...zero... the explosive charge detonates with a gigantic bang.

Black smother clouds the sky. The fire splays at a furious rate.

The car is ablaze. The camera crew "stalks" carefully towards the scene.

"Fast as firemen" they offend against the fire with a C-hose.

Five minutes later. White vapour announces the end of the fire.

And action! The camera crew works up a sweat.

Finally the car wreck is cooled of. The forensic unit prepares for the job.

A hot lead! The production crew shoots close to the "crime scene".

The evidence is clear: Complete success for the forensic unit with **SECUTAG®**.
